Python Fundamentals MCQ Quiz

Instructions. For each question, answer: *"What will be printed in the console?"*
If multiple lines are printed, the answer choices use a semicolon **";"** to indicate outputs on separate lines (e.g., `a; b; c` means three lines: `a` then `b` then `c`).

1. **Code:**

```
my_string = "hello world"
print(MY_STRING.lower())
```

   1) None
   2) NameError
   3) HELLO WORLD
   4) hello world

2. **Code:**

```
x = "university"
y = x[1:4]
print(y)
```

   1) univ
   2) uni
   3) nive
   4) niv

3. **Code:**

```
x = [str(8)]
print(type(x))
```

   1) `<class 'str'>`
   2) `<class 'list'>`
   3) `<class 'int'>`
   4) None

4. **Code:**

```
x = 100
y = "250"
z = x + y
print(z, type(z))
```

   1) TypeError
   2) 350 `<class 'int'>`
   3) 350 `<class 'str'>`
   4) 100250 `<class 'str'>`

5. **Code:**

```
fruits = ["apple", "orange"]
fruits.append("mango")
fruits.append("mango")
print(fruits)
```

   1) `['apple', 'orange', 'mango', 'mango']`
   2) `['apple', 'orange', 'mango']`
   3) `['apple', 'orange']`
   4) None

6. **Code:**

```
course = "Data Analysis"
course = course.replace("a", "x")
course = course.replace("A", "a")
course = course.replace("x", "A")
print(course)
```

   1) "Data Analysis"
   2) None
   3) "DAtA anAlysis"
   4) "Dxtx anxlysis"

7. **Code:**

```
x = 10
y = 10.0

if y > x:
    print("hello")
else:
    print("goodbye")
```

   1) TypeError
   2) hello
   3) goodbye
   4) hello; goodbye

8. **Code:**

```
x = 10
y = 15
z = 20

if y >= z or x >= y:
    print("hello")
elif z > x:
    print("goodbye")
else:
    print("see you")
```

   1) goodbye
   2) see you
   3) hello
   4) None

9. **Code:**

```
x = ""
y = 5
z = 10

if z > y:
    print("goodbye")
if z > y and x:
    print("hello")
if not x:
    print("see you")
```

1) goodbye; hello
2) goodbye
3) hello; see you
4) goodbye; see you

10. **Code:**

```
fruits = ["apple", "orange", "mango"]
for fruit in fruits:
    print(fruit[1])
```

1) p; r; a
2) apple
3) apple; orange; mango
4) a; o; m

11. **Code:**

```
fruits = ["apple", "orange", "mango"]
for fruit in fruits:
    print(fruits[1])
```

1) NameError
2) a; o; m
3) p; r; a
4) orange; orange; orange

12. **Code:**

```
city = "uni zuri"
for i in range(len(city)):
    if i > 3:
        print(city[i])
```

1) z; u; r; i
2) uni zurich (x4 times)
3) z; u; r
4) u; n; i; ; z; u

13. **Code:**

```
def addition(a, b):
    c = a + b
    print(c)

x = 10
y = 5
z = addition(x, y)
print(z)
```

1) None; None
2) 15; None
3) 15; 15
4) None; 15

14. **Code:**

```
def division(x, y):
    z = x / y
    return z

x = 10
y = 5
z = division(y, x)
print(z)
```

1) 0.5
2) None
3) 2.0
4) NameError

15. **Code:**

```
def increment(number, by=1):
    return number + by

x = 0
for i in range(5):
    if i < 2:
        print(increment(x))
    else:
        print(increment(x, 2))
```

1) 1; 2; 4; 6; 8
2) 1; 1; 1; 2; 2
3) 1; 1; 2; 2; 2
4) 1; 2; 3; 5; 7
